Comments:

- One of the best presentations
- Style of delivery communicated helpful information exquisitely
- A lot of repetition from the lecture given the day before. Would like more insight on the pathophysiology of insulin rather than just presenting the case for insulin over calories.
- Simplistic left me waiting for more
- Excellent speaker. (5)
- Inspired to hear 25% of population in Sweden follows a low carb diet.
- Great use of humor!
- Once again, very engaging; simple things I can take back to patients and colleagues
- I felt that this was too similar to the lecture he gave during the nutrition course.
- Excellent graphics (5)
- Dr. Eenfeldt was enjoyable to listen to as well as informative.
- Best speaker of the day Simple and to the point
- Very interesting and great speaker (2)
- A good person to put out the message
- Entertaining style of speaking. I thought there could have been a bit more science or a bit more information about how to explain this to patients in language they understand.

- Good presenter, good graphics, information, though, was at a patient rather than an MD level.
- Have him come back
- What a great lecture, very witty speaker – very, very good! I am thankful he came and hope he can come again
- Riveting speaker
- More science please! I didn't learn much here because I felt the lecture was quite superficial.
- Will stick in my brain forever
- The best speaker I've ever seen
- Clinically relevant
- Great presentation. Presented the etiology and physiology of obesity in a new light.....elevated Insulin.
- Conceptually good and entertaining speaker, but would like to see a little more scientific rigor; very basic in presentation
